

The Future of Senior Care is here.

Ambient Monitoring for Modern Senior Living and Home Health

Make Butlr Care part of your new standard for care – one that delivers better outcomes while simplifying care and strengthening the bottom line.

Strengthen Occupancy

Reduce hospitalizations and extend lengths of stay with proactive care. Catch new health conditions often associated with changes in activity – like bathroom usage, gait speed, and restlessness.

Reduce Risk & Liability

Respond faster and mitigate the impact of acute health risks. Customizable, rules-based alerting notifies care staff in real-time about risk events, including potential falls, wandering, out-of-bed incidents, and more.

Empower Your Staff

Lessen the need for routine check-ins and paperwork, while empowering your staff to maximize time and focus for delivering compassionate care – all by using the tools they already know.

Stand out with Award-Winning Tech

Attract residents who value individual privacy, independence, and technology that improves daily living. Butlr's award-winning technology is unobtrusive, 100% anonymous, and requires no change to daily routines.

TRUSTED BY EXPERTS

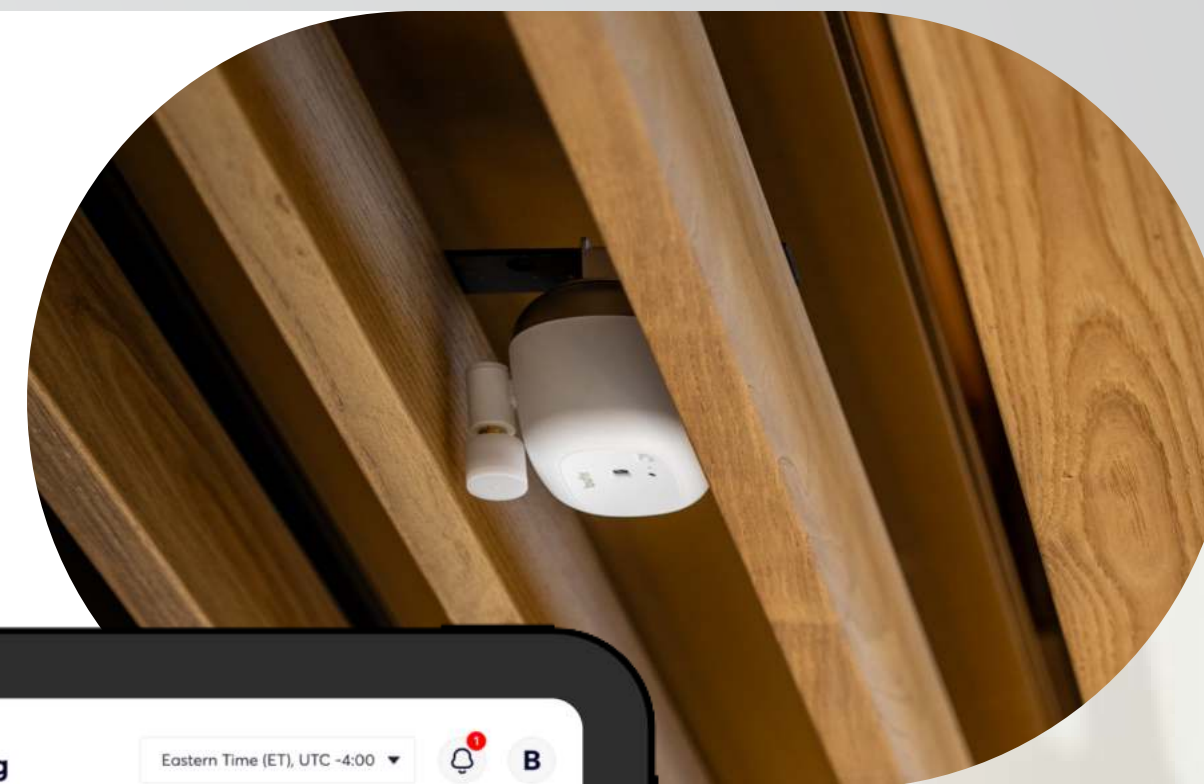

We're proud to partner with Butlr to bring the benefits of ambient monitoring to communities across the country. Customers can receive alerts sent by Butlr Care directly in the Notify app – **saving time and enabling staff to focus on delivering high-quality, needs-based care.**

Greg Robertson | SVP/GM, Notify Nurse Call

butlr.com/care

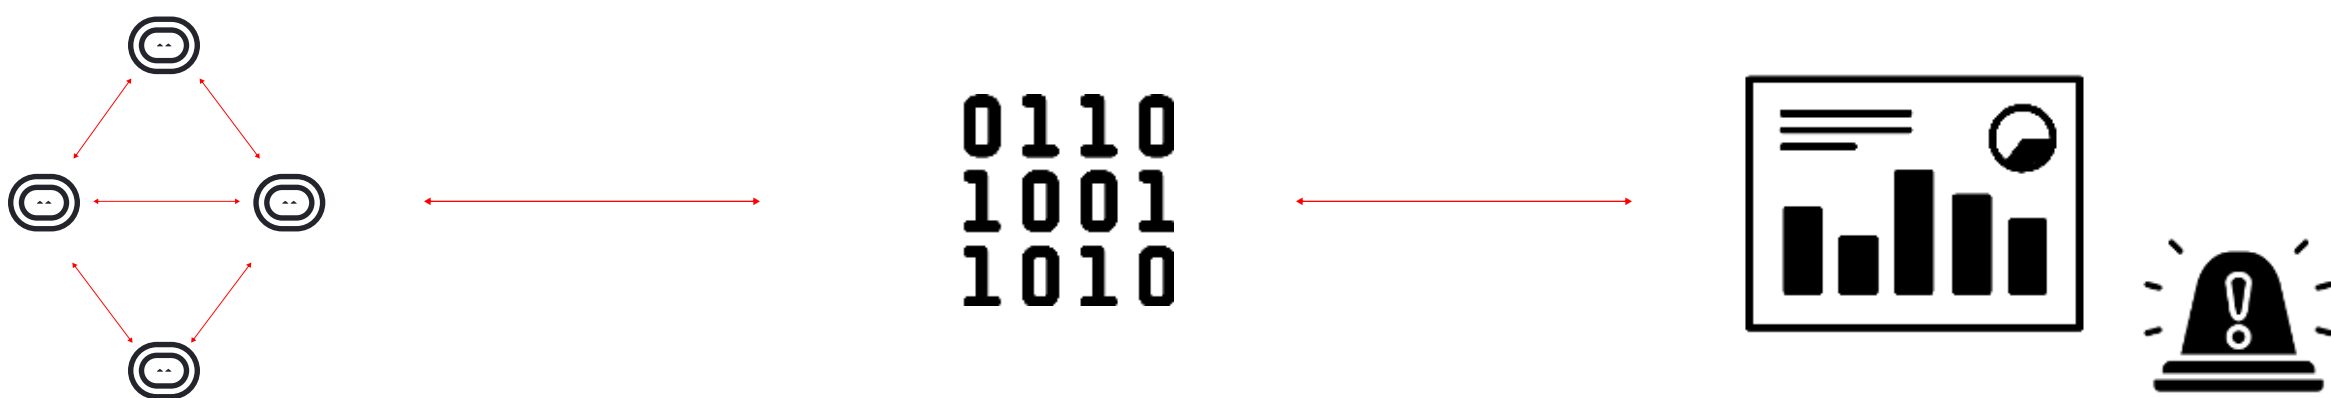

Butlr Care is the **world's first ambient monitoring platform** based on thermal sensing. Unlike other solutions, our unobtrusive ceiling-mounted sensors are highly accurate, easy to deploy, and preserve **individual privacy and independence**.

SOLUTION HIGHLIGHTS

-  Passive check-in & night watch
-  Nurse call system integrations
-  Activities for Daily Living (ADLs) audits
-  100% Anonymous
-  Sensor installs in less than 3 mins
-  Real-time alerting and notifications
-  Keep existing workflows
-  Wandering & out-of-bed

HOW IT WORKS

Heatic Sensor

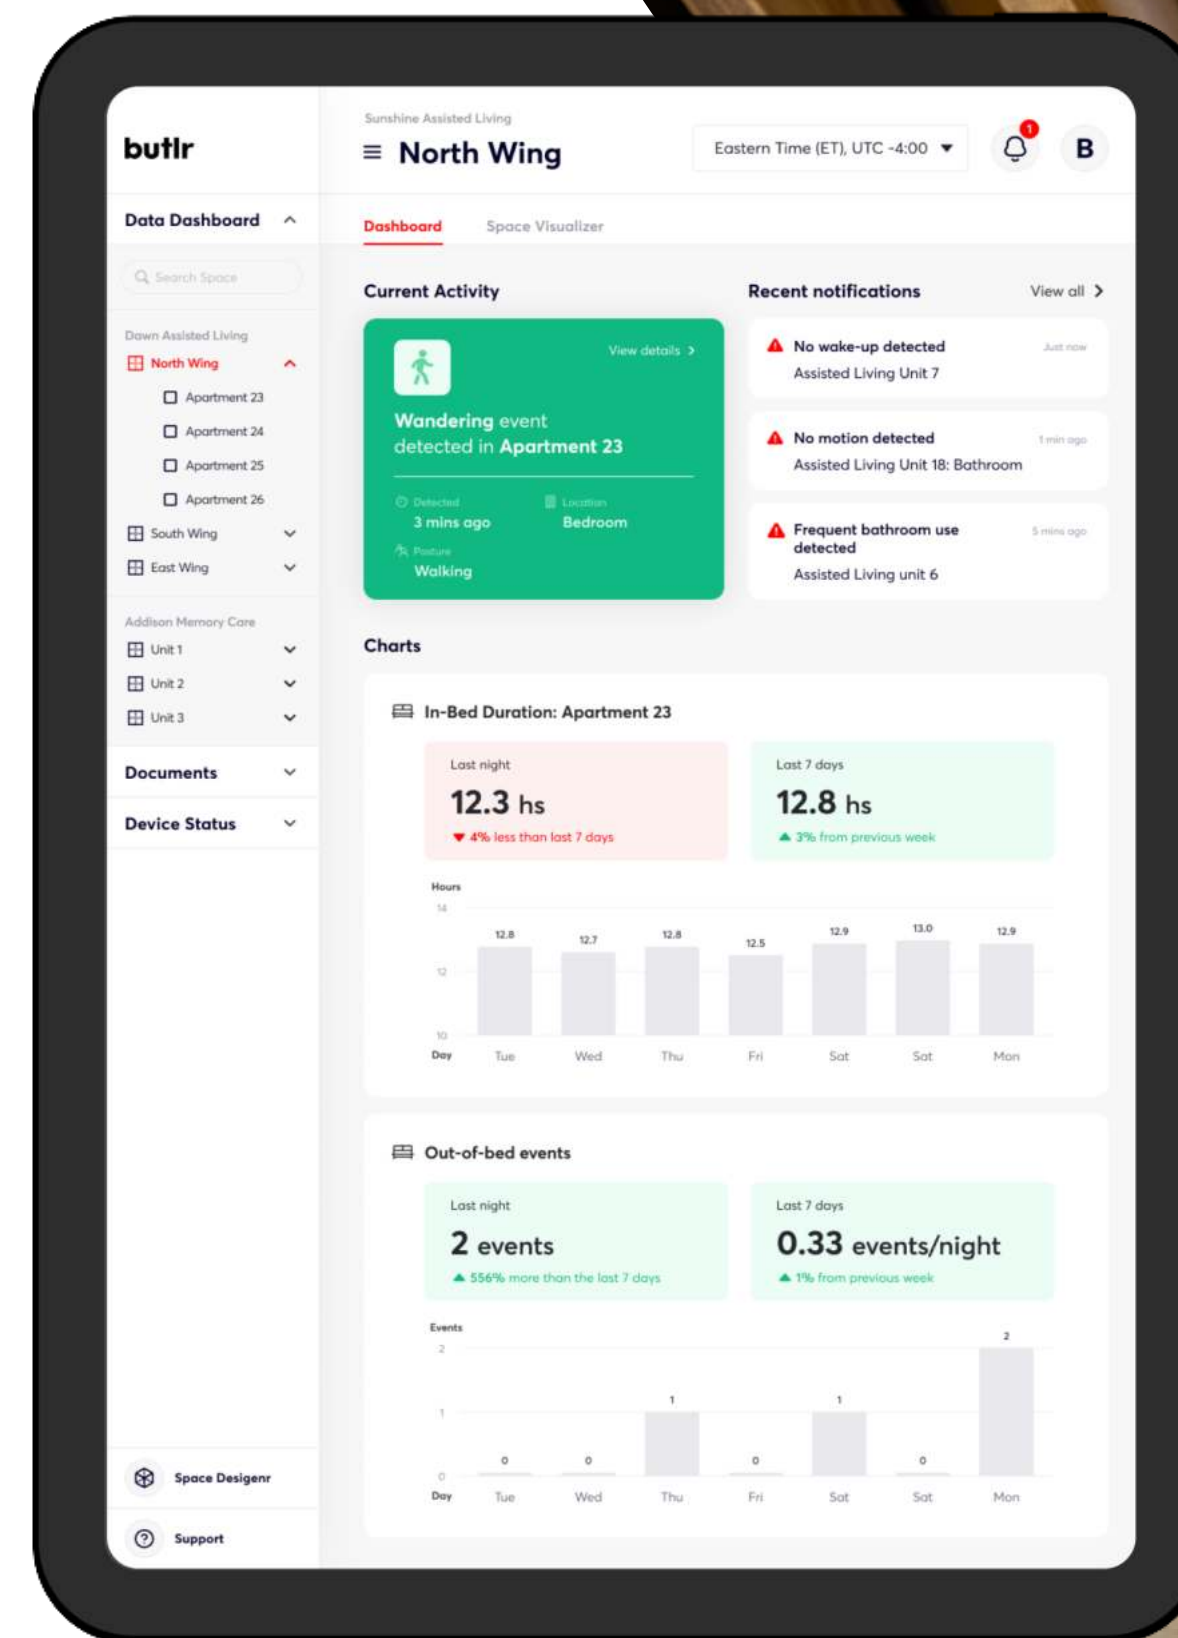

Our intelligent sensor identifies body heat signatures, tracking human movement and basic activities, such as walking, sitting, and laying down.

Real-time Alerts via AI Monitoring

Thermal data is processed by our advanced algorithms, which have been specially trained in care environments, to send alerts in real-time based on configurable business

Flexible Integrations

Accurate, real-time data is surfaced via our API in the software programs and tools already used by care teams on a daily basis.
